

Bioorganic Chemistry (Chem 468/568)

Research, Room 202

Thursday Nights, 4:30-7:10

Instructor: Barney Bishop

Office: *1016 Institute for Advanced Biomedical Research*

Phone: 703-993-8302

e-mail: bbishop1@gmu.edu

Web page: adr.gmu.edu

Office Hours: TBD

Class notes will be available for download on BlackBoard

Recommended Texts: No specific text is recommended. However, Biochemistry and Organic Chemistry texts would provide good supplemental reading for several lectures. Additional reading material from the literature will be recommended throughout the semester.

This course is intended to provide students with a basic understanding of the chemical nature of biomolecules and biomacromolecules. As part of this course, students will be introduced to biomolecules such as amino acids, proteins, carbohydrates and lipids. Specifically, lectures will focus on their biophysical properties, synthesis and modification. Throughout the semester, practical examples and visual aids will be employed in order to emphasize the significance and ramifications of the subject matter.

Goals of this course:

- 1.) Introduce/reintroduce students to amino acids, peptides, proteins and their biochemical and physical properties.
- 2.) Introduce students to the chemistry behind peptide synthesis, peptide mimetics, combinatorial chemistry, protein modification and applications for enzymes in chemical synthesis.
- 3.) Introduce/reintroduce students to carbohydrates and their biochemical properties
- 4.) Introduce students to the chemistry behind carbohydrate chemistry and oligo/polysaccharide chemical synthesis.
- 5.) Introduce students to the relationships between biomolecules and modern materials

The bulk of the material presented in lectures will be drawn from several sources, and where appropriate reference information for primary source material will be given to the students.

Grading and Examination Policy

For graduate students enrolled in **CHEM 568**, grades for will be based on:

- Two in-class or take-home exams (03/08 and 04/19) and a final exam (05/10). Students are primarily responsible for material covered in the lectures and selected reading material. Each of these exams will contribute equally (20%) to your final grade in the class. A grade of 0 (zero) will be assigned for missed exams.
- In addition to the exams, graduate student will work in pairs to present a 20-minute lecture at the end of the semester on a topic from the literature that is relevant to bioorganic chemistry. This talk will contribute 20% of your final grade.
- Participation in class discussions will account for the remaining 20% of your grade for the class.

Note: Please turn off cell phones and beepers in this class.

Week	Date	Topic	In Class	Reading
1	01/25/18	Introduction	Lecture	-NA-
2	02/01/18	Introduction – amino acids and proteins	Lecture	Lecture Notes (supplement with a general biochem. text)
3	02/08/18	Peptide chemical synthesis	Lecture	Lecture Notes (supplement with organic text)
4	02/15/18	1.) Peptide chemical synthesis (continued) 2.) Peptide Mimetics	Lecture	Lecture Notes (supplement with organic text)
5	02/22/18	Combinatorial Chemistry	Lecture + discussion	Lecture Notes
6	03/01/18	1.) Protein/peptide modification & 2.) Enzymes in chemical synthesis	Lecture + discussion	Lecture Notes
7	03/08/18	Test I		Lectures from weeks 1-6
8	03/15/18	No Class – Spring Break		
9	03/22/18	Molecular Recognition and Supramolecular Chemistry	Lecture + discussion	Lecture Notes
10	03/29/18	1.) Introduction to carbohydrates 2.) Chemical synthesis of oligosaccharides and carbohydrates – part 1	Lecture	Lecture Notes (supplement with general biochem text)
11	04/05/18	1.) Chemical synthesis of oligosaccharides and carbohydrates – part 2 2.) cyclodextrins	Lecture + discussion	Lecture Notes
12	04/12/18	Bio-inspired materials Biomolecular interactions with polymers	Lecture + discussion	Lecture Notes
12	04/19/18	Test II		Lectures from weeks 9-12
13	04/26/18	Student Presentations		
14	05/03/18	No Class		
	05/10/18	Final Exam		4:30-7:15
