Are you completing this form on someone else's behalf?

No

Effective Term: Spring 2022

Subject Code: EVPP - Environmental Science & Policy **Course Number:** 113

Bundled Courses:

Is this course replacing another course? No

Equivalent Courses: EVPP 111 - The Ecosphere: An Introduction to Environmental Science II

Catalog Title: Ecosphere: Introduction to Environmental Science II–Lab

Banner Title: Intro Env Sci II-Lab

Will section titles vary by semester? No

Credits: 1

Schedule Type: Laboratory

Hours of Lab or Studio per week: 3

Repeatable: May be only taken once for credit, limited to 3 attempts (N3)

Max Allowable Credits: 3

Default Grade Mode: Undergraduate Regular

Recommended Prerequisite(s):

~~EVPP 112~~

Recommended Corequisite(s):

Required Prerequisite(s) / Corequisite(s) (Updates only):

EVPP 112 (concurrent enrollment permitted)

Degree(s):

School(s):

Catalog Description:

Studies components and interactions that make up natural systems of our home planet. Teaches basic concepts in biological, chemical, physical, and Earth sciences in a hands-on laboratory format, focusing on major environmental issues from a scientific perspective. Note: EVPP 112 and 113 can be used to fulfill a 4-credit lab science requirement.

Justification:

What: Adding EVPP 112 as a required prerequisite, concurrent enrollment permitted.

Why: To ease degree audits where students have taken EVPP 111 (which is now EVPP 112 lec + EVPP 113 lab); EVPP 112 + 113 should be equivalent to EVPP 111.

Does this course cover material which crosses into another department? No

Learning Outcomes:

- Understand how scientific inquiry is based on investigation of evidence from the natural world, and that scientific knowledge and understanding:
  - evolves based on new evidence.
  - differs from personal and cultural belief.
- Recognize the scope and limits of science.
- Recognize and articulate the relationship between the natural sciences and society and the application of science to societal challenges (e.g., health, conservation, sustainability, energy, natural disasters, etc.).
- Evaluate scientific information (e.g., distinguish primary and secondary sources, assess credibility and validity of information).
- Participate in scientific inquiry and communicate the elements of the process, including:
  - making careful and systematic observations.
  - developing and testing a hypothesis.
  - analyzing evidence.
  - interpreting results.

Natural Sciences w/Lab

Integration Courses:

Green Leaf Course Designation

The proposed course is requesting (choose one):

Sustainability-related designation

Below, include a brief statement regarding how this course meets either the "sustainability focused" or "sustainably related" criteria.

Sustainability-related courses help build knowledge about a component of sustainability or introduce students to sustainability concepts during part of the course. They may complement sustainability-focused courses by providing students with in-depth knowledge of a particular aspect or dimension of sustainability (such as the natural environment) or by providing a focus area (such as renewable energy) for a student's sustainability studies, or they may broaden students' understanding of sustainability from within different disciplines.

previously approved for EVPP 111

Natural Sciences with Lab

Course must meet the following learning outcomes:

1.Understand how scientific inquiry is based on investigation of evidence from the natural world, and that scientific knowledge and understanding: a) evolves based on new evidence, and b) differs from personal and cultural beliefs

2. Recognize the scope and limits of science.

3. Recognize and articulate the relationship between the natural sciences and society and the application of science to societal challenges (e.g., health, conservation, sustainability, energy, natural disasters, etc.).

4. Evaluate scientific information (e.g., distinguish primary and secondary sources, assess credibility and validity of information).

5. Participate in scientific inquiry and communicate the elements of the process, including: a) making careful and systematic observations, b) developing and testing a hypothesis, c) analyzing evidence, and d) Interpreting results.
