Catalog

Description:

Presents the trans-disciplinary discipline of conservation medicine, the study of relationships between organism and ecosystem health and environmental conditions. Topics include infectious and noninfectious diseases, pathogens, processes, and impacts on human, biotic, and ecosystem health, and how to address the consequences of diseases to populations and ecological communities. Notes: This course will co-meet with EVPP 527. Undergraduate students in this course will have separate (shorter) reading and writing assignments and will be graded according to a different rubric than the graduate students.

Justification:

The title of EVPP 427 is being modified from Disease Ecology and Conservation to Conservation Medicine to align with a new concentration Dr. Aguirre is creating for the Master's program in ESP.

Does this course cover material which crosses into another department? No
