Catalog

Description:

Focused on the creation and application of maps, with an emphasis on thematic mapping. ~~Study and creation of maps.~~ Includes fundamental ~~Fundamental~~ mapping principles (projection, scale, generalization, symbolization), spatial data selection ~~symbolization~~ and acquisition, and effective design choices for geospatial communication, utilizing mapping software and digital outputs. ~~applied computer-based cartographic production.~~

Justification:

What:

Update title and catalog description as part of effort to keep undergraduate and graduate curriculum in sync and catalog copy accurate. In particular, this syncs titles and descriptions of GGS 310 and GGS 551

Why:

There are several reasons why GGS is aligning upper level undergraduate courses with graduate courses. The new course title and description more accurately depicts the modern content of the course. The alignment also makes it easier to potentially crosslist the undergraduate/graduate courses, allowing GGS to better deploy faculty teaching assignments. The department is also expecting more BAM students, and these alignments make logistics for BAM students and advisors easier by establishing consistent graduate level equivalencies to undergraduate courses.

Does this course cover material which crosses into another department? No
